

Europa Series

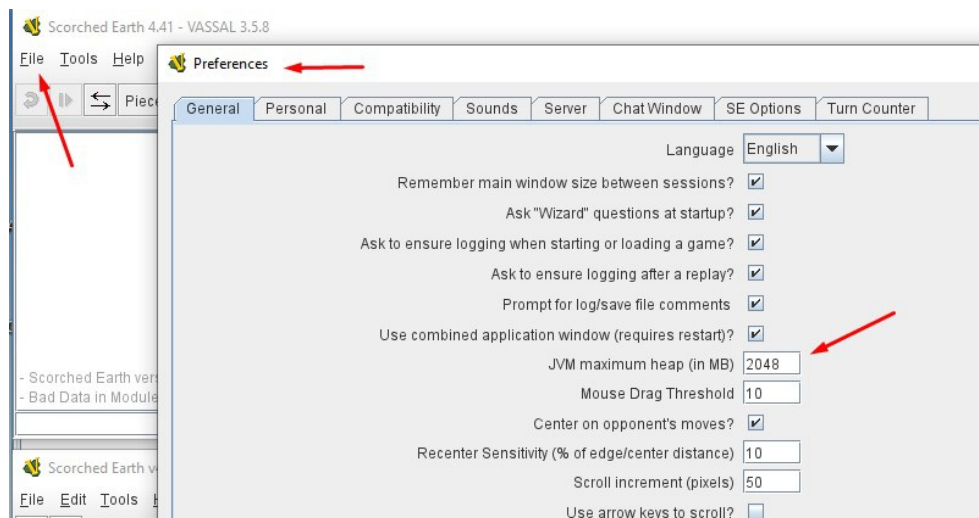

Fire in the East/Scorched Earth

(Europa I/Europa II)

German (& Axis) invasion of Russia, June, 1941 through December, 1944

First off, as you know, this computer game uses the Vassal engine (www.vassalengine.org) to control the game and handles most of the mechanics of the game but you'll need to know the rules of the board game to actually play it correctly (and effectively) – those are included as a PDF. Also, if you are blessed with lots of extra room (and can buy a ping pong table for setting up a physical game), and a wife who thinks it is great you've occupied the entire living room for a month or two playing the game (causing it to look like a destroyed WWII Division's bivouac area during your gaming time), then you're more fortunate than me and you don't need this computer game I've coded; I've coded this game simulation for those of us who are not as blessed. In addition, this game is no longer being published unfortunately, but is an excellent game on the subject, with considerable research done by the designers. I would hate to see their excellent work lost over time.

I want to up-front give credit to those who helped me in this project: my good friend and playtester Douglas Trumble (who also playtested with me the board game Scorched Earth in 1987); and, Tom Crispin whose excellent suggestions and help reduced the size of the computer “footprint” of the game to something that could fit in and run on most, if not all, computer's memory. You will need to set Vassal's JVM Maximum heap value to 2048 (MB). This game is large and uses a lot of resources. If you don't set this value, you will get an “out of memory” error.

The Europa I - Fire in the East was the first “monster game” that I played. I was privileged to be invited to help play test **Europa II - Scorched Earth**, an extension of Europa I - Fire in the East. It is a WWII (World War 2) operational level board game covering the war between the Axis (primarily German) and Russia. The conflict (42 months or 3 ½ years) is what this game represents. I've implemented it from the board game to a computer game that covered, in this computer simulation, the campaign of the German surprise attack, June 1941, through the end where the Soviet pushed the Axis out of the USSR, with the game finishing at the end of December 1944. Most, if not all, the bookkeeping mechanics of the board game are now handled by the computer leaving the players free to concentrate on their strategy to win with whatever side they are playing.

This Computer game will control and handle the routine “mechanics” of playing the board game and what those rules require in tracking values, eliminating the need for a table in the living room to hold the game, the need to have everyone in the same room or at the same time, and a bunch of paper & pens for keeping track of losses, replacements, combats, calculating odds, etc. What you will need to supply is a winning strategy, with operational tactics and knowledge of the game rules - the wise use of planning, grand tactics and knowledge of the rules is the “combat experience” that will give you an edge in this game (or most any other game for that matter).

– **Keyboard Combinations Nomenclatures used in the game:**

Alt-? = Hold the *Alt* key on keyboard and press a key following the “-”.

Ctrl-? = Hold the *Ctrl* key on the keyboard and press a key following the “-”.

Ctrl Shift-? = Hold the *Ctrl* and *Shift* key on the keyboard and press a key following the “-”.

Alt Ctrl Shift-? = Hold the *Alt*, *Ctrl* and *Shift* keys on the keyboard & press a key following the “-”.

Shift-? *There are no keyboard combinations that use only the “Shift key and a letter or symbol” to avoid the possible accidental keyboard activations during a conversation or messaging in the Chat window.*

– **The Game Turn Sequence** from the board game in Scorched Earth is what’s given here in phases –

The turn phases has German turn phases, then Soviet turn phases, making one Game Turn:

German’s turn phases –

1. Initial:
2. Movement:
3. Air:
4. Combat:
5. Exploitation:

Soviet’s turn phases –

1. Initial:
2. Movement:
3. Air:
4. Combat:
5. Exploitation:

The above is one game turn which represents ½ month of time in game time scale. Two game turns is one month of represented real time.

There are a number of actions you can do in each phase. A detailed list of these actions is available in the rules or in the “Charts” button under the “Turn Sequence” tab on the Main map menu bar. Also, all the keyboard combination needed for each phase in the turn sequence is detailed under the section where it is used and described below in “**How to play this game as given by Phases**”.

Situation: The Germans, without most of their allies joining (the Axis Allies), have planned a Surprise Attack against the Soviet army and are attempting to win a victory over the Soviet before they can regroup from the Axis attack. The Soviet army was caught in the middle of reorganizing the army after the Soviet’s disastrous winter war in Finland. They were hoping the Axis will delay any attack until the Soviet army was strong enough to attack first.

Victory Conditions:

Germans - The victory points must be 15 or more points to win a (marginal or higher) German victory. (See Rule 37.B. & C. on page 29 of the game rules.)

Soviet - The victory points must be 14 or less points to win a (marginal or higher) Soviet victory. (See Rule 37.B. & C. on page 29 of the game rules.)

Game start: The Game Turn will be started on Turn 1941 Jun, I (to run the German Surprise ground and air attack turn, skipping all other German phases and all Soviet phases during this Surprise turn), then continue with the regular turns starting on Jun, II '41. (The normal game turns begin on Jun II '41 (and will be designated below the computer game Time Record Chart as Game Turn 1). *If the Game Turn does not show 1941 Jun I, then put the mouse over the **Game Turn Icon** and **Left-Click** then **Right-Click** the displayed Phase and select "Set Turn". Select the starting phase from the list that comes up [Initial phase] for 1941 Jun I). Starting on this phase you'll need to perform the Surprise Turn first against the Soviets consisting of the Surprise German Air Attack by Clicking on the "Execute Air Phase – Surprise!" button then performing one German movement phase and one German combat phase then clicking the game turn past the other German phases and all Soviet phases on the 1941 Jun I turn without the Soviets doing anything in any of these phases. (see Rule 31.F & 31.G)*

Game end: The Game is over after the end of the Soviet's December II, 1944 game turn.

Game Scale: Each Hex is 16 miles across; One complete game turn (when the Axis and Soviet both completed all their respective phases is one turn) = ½ month; counters represent Companies (I), Battalions (II), Regiments (III), Brigades (X), Divisions (XX), and Soviet reorganized Divisions, the Soviets called Corps (XXX).

Game Mechanics:

- Always remember to hold down the **Alt** key when **Left-Clicking** on a unit to **Select** it on the Map. This will cause a **Red Circle to flash** on the unit(s) selected on the opponent's map showing your opponent where you are performing your next combat (or movement or any other activity).
- Everything that any game unit can be instructed to do can be seen by **Right-Clicking** on the **game unit** to bring up the unit's menu listing all the options available to that game unit or a sub-menu to the listed option.
- All game units that are able to move can be **Left-Clicked with the mouse button held down** then **dragged** to whatever location you wish within their movement limitations. *Some of the most heated arguments (and hurt feelings) I've seen in this game (other than die rolls) have to do with a game unit's movement – where did it come from and how did it get where it is at! The following rule is intended to substantially reduce or eliminate these arguments. Since each game unit leaves a "movement trail" when you move it, each side will know where each game unit started and how it got to where it is currently located. This shows the other player(s) how your game unit moved through the hexes on the map – its path. You need to move the game unit in a straight line along the flat side of the hexes, thus leaving an unambiguous trail, in each direction the game unit moves. You can release the moving unit before a change of direction then Select it again and move it in a new direction. This will show the change in direction showing the hex where the game unit's direction changed as well as what terrain was moved over. This movement trail will also be important to resolve questions of movement costs and possible zones of control effects during the Movement Phase. Rule: "Clear Movement Trail" – The "movement trail" lines left by moving the game unit is the game unit's movement in the movement/air/exploitation phases through whatever terrain it covers - NO EXCEPTIONS. If you do not make a **clear** movement trail, your opponent **will** decide what hexes your unit moved through using any hexes the opponent chooses that the movement trail touched or passed through including moving the game unit back if it doesn't have the movement points to reach the player's final intended hex location – even if the original moving*

player doesn't think the path the opponent selected makes any sense!! This is the cost of not having a path that is clear! When moving, make your moving unit's paths clear! If you make a mistake, in the upper left corner of the game window is an "Undo" icon/button " - press this to "Undo" your last action taken. You can go back and "Undo" a number of actions, but you cannot redo an action after you "Undo" that action - there is **no** "Redo" icon/button to redo the "Undo" just made. So be careful with your moves and pressing the Undo button.

– **Eliminated game units** will remain on the map (with the appropriate eliminated indicator on an Air unit, " > ") until you Select and press **Ctrl-E** for a ground unit to be eliminated or, for an Air unit, (Rem - Remnant) **Alt-Ctrl-R**, (EET - Eliminated over Enemy Territory) **Alt-Ctrl-E**, (EFT - Eliminated over Friendly Territory) **Alt-Ctrl-F**. The ground game unit will be placed into the appropriate Axis or Soviet Eliminated Box, " Axis  Soviet", if replaceable, but an Air unit in the Eliminated Friendly Box (EFT), Eliminated Enemy Box (EET), or Remnant Box (Rem) depending on the eliminated situation you choose (as explained later) on the Axis Air or Soviet Air chart located in Charts on the Main map toolbar.

Ground Units – All ground units eliminated, no matter what their state of isolated or non-isolated, are eliminated by **Right-Clicking** on the **ground unit(s)** to be eliminated and **Left-Clicking** on **Eliminated** (or by Selecting Unit then pressing **Ctrl-E**). The game will perform the correct action for the eliminated ground unit(s) as described below:

Isolated Ground Unit: A ground unit marked as Isolated will not generate Special Replacement Points (SRPs), (See rule 34.B.3, page 27) and they will be placed into the Eliminated Box if it is a replaceable unit. If the ground unit has a cadre, it will substituted in place for the eliminated unit.

Non-isolated ground unit: A non-Isolated ground unit will generate Special Replacement Points (SRPs), (See rule 34.B.3, page 27.) They will be placed into the Eliminated Box if it is a replaceable unit. If the ground unit has a cadre, it will replace the eliminated unit in place (its current location on the map).

Air Units – Due to the fact that Air Units are never in a state of Out of Supply or Isolated but only vary where they go when eliminated as determined by the current "Front Line" or how it was eliminated, the player will need to choose which eliminated box each Air Unit should go as described below:

Eliminated over Friendly Territory: If an eliminated air unit was considered in Friendly territory, which is within 2 hexes of a hex controlled by the air units' player, you will need to **Right-Click** on the **Air unit**, then **Left-Click** on **EFT** (or by pressing **Alt-Ctrl-F**). (See rule 26.C. & D.1, page 19)

Eliminated over Enemy Territory: If an eliminated Air unit was not considered in Friendly territory, meaning when it was more than 2 hexes away from a hex controlled by the Air units' player, it is automatically considered in Enemy territory. You will need to **Right-Click** on the **Air unit**, then **Left-Click** on **EET** (or by pressing **Alt-Ctrl-E**). (See rule 26.C. & D.2, page 19)

Destroyed on the Ground: If the eliminated Air unit was destroyed on the ground for any reason, i.e., by enemy Air unit tactical bombing the Air unit on an airbase or the airbase being occupied by an enemy ground unit and the Air unit not escaping, it is placed in the Remnants Box. You will need to **Right-Click** on the **Air unit**, then **Left-Click** on **Rem** (or by pressing **Alt-Ctrl-R**). (See rule 26.D.3, page 19)

– **Keyboard combinations:**

The following is a description of important Keyboard combination uses (shortcuts) that can be used in the game, instead of using a game unit's **Right-Click** Menu. Most Keyboard shortcuts require that

you Select one (or more) Game unit before pressing the Keys (Right-Click or Left-Click on Game unit to Select it). (In attacking or defending when using Keyboard combinations, usually more than one Game unit may need to be selected to have the action performed on/with them.) The Key combinations listed here are given for a PC type computer. However, any type computer (Mac, Unix, etc.) can run this game and interact with any other type computer, but you'll need to convert the keyboard combinations' Alt, Ctrl, Shift to your computer's equivalent if you're not using a PC type computer. As you read the list of Keyboard combinations, it may seem like a lot of different Keyboard combinations, but after playing, it will not be as complicated as it may appear at first, plus there is always the game unit's right-click menu with all the options that are available to the unit. Also, a list of Keyboard combinations that are most commonly used together in each of the game phases are giving below under "**How to play this game as given by Phases**".

– Selecting / Unselecting a Game unit or Game units:

Most Keyboard combinations require that you Select one (1) or more Unit/Game unit in the game before pressing the Keyboard combination to make the Keyboard combination work properly.

Select one unit by **Left-Clicking** or **Right-Clicking** - *on a single Game unit to Select it.*

Select groups of units by **Left-Click and hold left mouse button down, then drag** across the map to select a group of Game units on the map - continue to drag the box around the game units you wish to select. If you missed Game units and/or selected too many Game units, then do this:

Hold the Shift key while Left-Clicking on a Game unit to add the Game unit to the selection.

Hold the Ctrl key while Left-Clicking on a Game unit to remove the Game unit from the selected game units.

To expand a stack of units, **double Left-Click** on the **stack**. To flatten the stack, **double Left-Click** on the **expanded stack**.

– Game unit Movement with mouse:

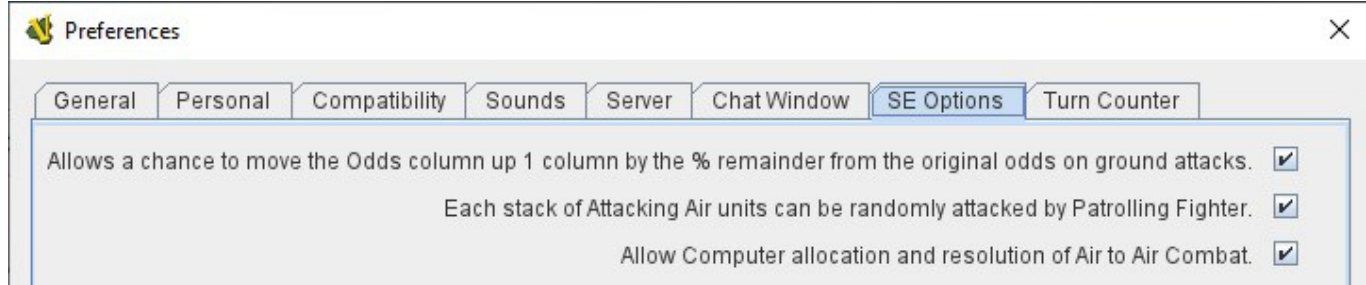

Left-Click - on a **Game unit**, **then drag, while holding down the Left mouse button**, to any location desired that is allowed by the rules and within movement range of the Unit(s) selected.

Menu (Toolbar) Buttons on top of Game Main Map Window

The Main Map Toolbar is loosely organized in the order you will need each button going from left to right through the game turn sequence.

Game Options: can be found and changed in **File – Preferences – SE Options –**

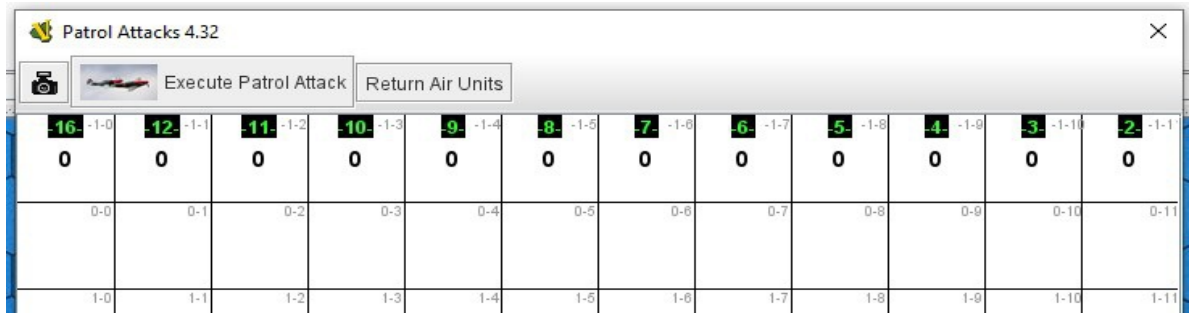

These options are explained in the sections in the area of **How to play this game as given by Phases** where they apply. However, here's a brief description of their functions.

(Personally, I encourage you to leave them all on. It makes for a considerably faster and more fun game play.)

Allows a chance to move the odds column up 1 column. – this option, when checked, will allow the game to raise the odds column by 1 column for any attack where the remaining amount of attack factors to defense factors, expressed as a percentage, is attempted to be rolled by a percentage die roll. If the percentage die roll is within the percentage chance, the odds column will raise up to the next higher column. *For example, attacking with 21, defending with 8 is 2.625 odds, a 2:1 attack – the probability of moving up to 3:1 odds is 62%*

Each stack of Attacking Air units can be randomly attacked by Patrolling Fighters. The Air Phase is a very interactive phase in this game and the board game rules are not conducive to computer play. I've designed a way around this problem while getting the same end results with a touch more realism I think. With this option checked, the non-phasing player's fighters will have a Patrol Zone around them during the air phase until they execute a Patrol Attack. When the phasing player has finished their air unit movement (thus leaving their movement trails), the non-phasing player will be able to see each air unit that passes through any fighter unit's Patrol Zone – ½ the movement range, rounded down, for Axis (and Soviet Guard Fighters starting on Oct I '42); 2 hexes for Soviet non-Guards Fighter Units (and for Guard Fighters before Oct I '42). The Guard Patrol Zones ranges will be automatically adjusted by the game on the Oct I '42 game turn. The non-phasing player chooses a single hex containing phasing player's air units that moved by **Left-Clicking** on it – this will highlight these air unit's movement trails. Before sending the phasing player's Air Units to the PA Map, "", the non-phasing player may add as many fighters whose Patrol Zone was passed through by any phasing air unit going to the chosen map hex. To send the fighter, **Right-Click** on the **fighter unit** and **Left-Click** on the **Perform Patrol Attack** (or press **Ctrl-P**). On the PA Map, the fighter unit's attack factor will add 1 to the column with the same value as the fighter unit's attack factor and the fighter unit's Patrol Zone will be removed so the fighter unit cannot patrol attack again this phase. After sending all the non-phasing fighters that will Patrol Attack the phasing player's Air Units flying to this hex, send the phasing Air Units to the PA Map by **Right-Click** on the hex stack containing the Air Units, then press **Ctrl-P** or select **Perform Patrol Attack**. (*It is*

necessary to first choose the non-phasing patrol attacking air units before sending the phasing air units to the PA Map because as soon as the phasing air units are sent to the PA Map, their movement trails will disappear. If you accidentally do this, **Left-Click** the **Undo Move** icon, “”, to return the air units to the PA Map.) After sending all the fighters the non-phasing player can or wants to send, then the non-phasing player will need to Select the current hex being Patrol attacked, **Right-Click** on the hex patrolled attacked and **Left-Click** on **Patrol Attack** (or press **Ctrl-P**). The units in the hex will be sent to the PA Map, “”, (which will have been automatically opened when the Air Phase was reached by the game turn advancing from the Movement phase to the Air Phase). If the PA Map is not visible, **Left-Click** on the **PA Map** button, “”, to open it on the main map toolbar. **Left-Click** on **Execute Patrol Attack** button on the PA Map menu bar after sending the Mission and Escort Air units to the **PA Map**. Each phasing player’s air unit that is turned back by the patrol attack will be surrounded by a light blue border. The non-phasing player will then need to **Left-Click** on **Return Air Units** on the **PA Map** menu bar to return the phasing player’s units to the map hex they were originally located on in the main map. The non-phasing player can continue this procedure until all phasing air mission hexes have been either patrol attacked or the non-phasing player is finished patrol attacking. (Even though the non-phasing player will know what and where every phasing mission air units will go before allocating and resolving Patrol Attacks, the non-phasing player cannot decide what air unit to Patrol Attack (unless there is only one in the hex) because the Patrol Attack will be randomly allocated against the available phasing air units in the target hex. A successfully Patrol Attacked air unit [and therefore marked as returned] will still be an available target to be Patrol Attacked with other remaining Patrol Attacking fighters against that same hex.)

Allow Computer allocation and resolution of Air to Air Combat. The non-phasing player, after finishing all patrol attacks, may fly intercepting fighter air units (including those that just Patrol Attacked), as interceptors, against any phasing player’s air mission that are in range $-\frac{1}{2}$ the Fighter’s range rounded down. After non-phasing player has flown all the desired fighter interceptors to all the Mission-Escort hexes, the non-phasing player will need to **Left-Click** an Interceptor-Mission-Escort stack and **Left-Click** on the **Main Tool Bar** the **Send to A2A Map** – this will need to be done to each Interceptor-Mission-Escort stack on the map. Once they are all sent to the Air to Air Map, open the Air to Air Map, by **Left-Clicking** on **A2A Map** if not opened already. On the Air to Air Map, **Left-Click** on **Fight ALL Air to Air combats** (may take a few minutes to resolve them all). After the Air to Air combat is resolved, **Left-Click** on **Return All Units** on the **A2A Map toolbar**. All the air units will be returned to the main map hex location where they were before moving to the Air to Air Map. The Air to Air Map can perform 20 air to air combats at a time. If there are more than 20 Air to Air battles, after resolution of the first 20 and the return of those air units, **Left-Click** on **Reset A2A Map** on the Main Map toolbar, then perform the same sequence for the next set of 20 air missions. If any air unit has a light blue border from the previous patrol attack, even though selected and moved to the Air to Air Map, it will not participate in or be affected by the Air to Air combat resolution. When both player’s air and mission units are returned, each player will need to eliminate, abort, and return all

affected air and mission units – this process is described in **Air Phase: 3. Resolve air combat (21)** below.

Here are the percentages of an intercepting fighter against the mission force and escort force:

1. When number of interceptors are equal to or less than the number of escorts – 80% to attack escort and 20% chance to bypass escort and attack mission force.
2. For each interceptor greater than the number of escorts – add 10% for each interceptor greater than the escorts to the chance to bypass the escorts, to a maximum of 70% chance to bypass the escorts. I.e., if 2 interceptors greater than the escorts, then the chance to bypass the escorts for each interceptor would be 40% (starting chance at 20% plus 2 extra interceptors over escorts 2 x 10% is: 20% + 10% + 10% = 40% chance to bypass escorts)
3. Each interceptor and escort will attack once only. Mission forces will return fire only if attacked by an interceptor and only one time. The Air to Air resolution chat window will look like this below. As can be seen, the Ju87B is attacked twice but returns fire only once per the rule each air unit may only fire once:

```

* Set 0 of Air2Air and Mission Units have been sent to the Air to Air Map.
* Interceptor Attack:
* Target-> Ju87B Air: Attack/Def: 2/3; Type: 'D' on Side: German *DiceRoll:6 (0) 6* Results: 'R' --- Attacker: I-16 Air; Attack/Def: 4/3 - Type: 'F' on Side:Soviet
* Target-> I-16 Air: Attack/Def: 4/3; Type 'F' on Side: Soviet*DiceRoll:8 (0) 8* Results: 'L' --- Attacker: Ju87B Air; Attack/Def: 2/3 Type 'D' on Side:German
* Interceptor Attack:
* Target-> Me109E Air: Attack/Def: 7/5; Type: 'F' on Side: German *DiceRoll:10 (0) 10* Results: 'L' --- Attacker: I-16 Air; Attack/Def: 4/3 - Type: 'F' on Side:Soviet
* Interceptor Attack:
* Target-> Me109E Air: Attack/Def: 7/5; Type: 'F' on Side: German *DiceRoll:4 (0) 4* Results: 'A' --- Attacker: MiG-3 Air; Attack/Def: 5/5 - Type: 'F' on Side:Soviet
* Interceptor Attack:
* Target-> Ju87B Air: Attack/Def: 2/3; Type: 'D' on Side: German *DiceRoll:4 (0) 4* Results: 'K' --- Attacker: MiG-3 Air; Attack/Def: 5/5 - Type: 'F' on Side:Soviet
* Interceptor Attack:
* Target-> Me109F Air: Attack/Def: 6/6; Type: 'F' on Side: German *DiceRoll:4 (0) 4* Results: 'A' --- Attacker: LaGG-3 Air; Attack/Def: 5/5 - Type: 'F' on Side:Soviet
* Escort Attack:
* Target-> I-16 Air: Attack/Def: 4/3; Type: 'F' on Side: Soviet*DiceRoll:9 (-1) 8* Results: 'R' --- Attacker: Me109F Air; Attack/Def: 6/6 - Type: 'F' on Side:German
* Escort Attack:
* Target-> MiG-3 Air: Attack/Def: 5/5; Type: 'F' on Side: Soviet*DiceRoll:5 (-1) 4* Results: 'K' --- Attacker: Me109E Air; Attack/Def: 7/5 - Type: 'F' on Side:German
* Escort Attack:
* Target-> I-16 Air: Attack/Def: 4/3; Type: 'F' on Side: Soviet*DiceRoll:8 (-1) 7* Results: 'A' --- Attacker: Me109F Air; Attack/Def: 6/6 - Type: 'F' on Side:German
*The above set of Air 2 Air and Mission Units has been returned to the Air to Air Map.

```

Undo Move: “” Allows you to undo your last move or action. It will undo one previous action performed (move, Fire, Rotation, etc.) for each press of the Undo Button.

Move through Log File and Server Control: “” Only used in PBEM (Play By Email) games and Setting up your initial connection at start of an online game. (See Help → User’s Guide → Game Play)

Ctrl-S: Will bring up or close Server Control window on right side of Chat window, if no game unit is selected.

Dead Units: “” This opens up a window that shows ground units that have been eliminated in the course of the game for either Axis or Soviet and are available for replacement through RPs.

Game Pieces: “” All the game Units for all armies and markers, are accessible through this button. **Left-Click** on the **tab** of your choice and the **Left-Click** on the **type of units** desired, then **Left-Click** on the **game unit** wanted for reinforcements and drag to the Main Map.

Dice Types: “” **Left-Clicking** on these produce random 1d6 , “”, (1 die of 6 sides) roll; 2d6 , “”, (2 dice of 6 sides) roll; 1d100 , “”, (1 die of 100 sides) roll – percentage die. Normally the game rolls the correct die set needed to determine result in Combat, and other game functions. There will be times you will need to “roll” the dice yourself. For instance, when you check for AA

(antiaircraft) fire, check for Tactical or Strategic bombing hits (and when you want to see random numbers appear in the Chat Window causing your opponent to wonder what you are doing). The roll will be displayed as “***1d6 Die = ?? *** <name>”; where ?? is the random roll between 1-6, or 2-12 or 1-100; and, name is the name of the person (entered at sign-in) that clicked the die button. You can also use the keyboard to roll the dice:

Ctrl-F1: Roll **1d6** Die (1d6 - 1 die, 6 sided), “”.

Ctrl-F2: Roll **2d6** Dice (2d6 - 2 dice, 6 sided), “”.

Ctrl-F3: Roll **1d100** Die (1d100 - 1 dice, 100 sided), “”, - percentage die.

Notes: “ Notes” This is where you will enter the information for your next Seaborne Invasion and/or Airborne Assault. After **Left-Clicking** on **Notes**, **Left-Click** on **Delayed**, then enter all the information required for doing an Airdrop (Airborne Assault), like the next location of the starting units, the hex location of the planned Airdrop, the turn the Airdrop will be done on, et cetera. When the turn arrives, under the Delayed tab, **Left-Click** on the **Check box** to the right on the **Note** under **Revealed** to allow the other player to see and verify the Airborne operation details.

Charts: “ Charts” All the game charts for CRT (Combat Results Table), Air Units, Air Loss placement Charts, ground unit breakdown chart, Game Turn (you can put replaceable units that only become available after a period of time on the Game Turn Track), Weather, and their modifiers, Setup OB (Order of Battle), Reinforcements, Available Soviet Guard Air unit upgrades, etc.

Game Turn: “” Clicking on Game Turn will bring up a small Game Turn window. This window has the Game Turn with the current game phase displayed in it including a minus “” on the left side and a plus “” on the right side. Pressing the plus will move the game to the next game phase; pressing the minus will move the game one phase prior to the current phase. *(Be careful about moving the game turn phase back phases. There are a number of game functions that program makes happen between phases and moving back a phase or two could really mess-up your game.)* If the game appears frozen after pressing the “white” plus (+) icon you’ll be able to see if the game is still working (i.e., still doing it’s calculations, placements, etc.) because the plus icon “” becomes light blue in color “” during its calculations.

Ctrl-T: Moves game turn phase to next phase; if last phase of game turn, then to next game turn, 1st phase, next player.

PA Map: “ PA Map” If you have not disabled the optional feature for Patrol Attack resolution to be handled by the computer, then this map will automatically become visible at the start of the Air phase of each player. It can also be opened or closed by **Left-Clicking** on the **PA Map** button.

Send to Air to Air Map: “ Send to A2A Map” If you have not disabled the optional feature for Air to Air Attack resolution to be handled by the computer, then after patrol attacks are finished and non-phasing player has flown the interceptor air units, **Left-Click** to each hex with a **stack of phasing and non-phasing player’s air units**, selecting all units (ground and air) in the hex (just **Left-Click** on the chosen **map hex**), then **Left-Click** on “ Send to A2A Map” button. The stack (all ground and air units) will be moved to the Air to Air Map, to see the units on the Air to Air Map, **Left-Click** on this button, “ A2A Map”, press again to close the map. Even though all ground units are sent to the Air to Air Map as well, you will not see them until the **Return All Units** button is pressed on the Air to Air Map toolbar and they will return to the ground hex they came from.

Air to Air Map: “ A2A Map” This will bring up the Air to Air Map where Air to Air combat is resolved. After you have sent each stack (up to 20 stacks at a time) to the Air to Air Map, you’ll need to **Left-Click** on the **Fight All Air to Air Combat** button, “ Fight ALL Air to Air combats”, located on the Air to Air Map. This will determine, in each stack, all the No affects, returns, aborts and KIAs. After all the

Air to Air combats are resolved (could take a few minutes), **Left-Click** on the **Return All Units**, ".

Reset Air to Air Map: "" If there are more than 20 air to air combats during an air phase, **Left-Click** on **Zero Air to Air Map** located on the Toolbar button (after **Left-Clicking** on **Return All Units**, "", has been pressed and returning the previous set of 20) to clear all the variables for the next set of up to 20 air to air combats.

Attack: "" **Left-Click** this button to calculate the attack factors of all **Selected attacking ground** and **Selected attacking (supporting) air units**. The game will adjust the attack factors for the effects of the number of turns ground units are unsupplied and the limitations on the addition of tactical air factors. However, Terrain hexes and hexside effects will require the results in the calculated attack factor's small window to be manually adjusted to take these terrain features into account for the defender's hex, hexsides attacked across and when Assault & Combat Engineers attack cities, etc..

Defend: "" **Left-Click** this button on the hex of the defending unit(s) to calculate the defense factors of all **Selected defending ground** and **Selected defending (supporting) air units**. The game will adjust the individual unit's defense factors for the affects of turns unsupplied and the limitation to the addition of defensive tactical air factors. It will then request the summed total of die roll adjustments (modifiers) for this combat. It will calculate the combat ratio, roll a 1d6 die for combat resolution and will adjust by the die roll, as adjusted by the total modifiers, then display the combat results in the Chat window. Owning player will need to implement the combat results on that own player's units as desired as long as the required losses and retreats are accounted for.

Find on Map: "" – **Left-Click** to **Highlighted** their **location** on main map.

"", Highlight/Unhighlight all *3-6 Infantry Unit locations on the main map (see Rule 34.D & 34.E.2). Starting on August I, 1941 turn, 4 of these units may be converted to 4-6 Infantry Units each turn by **Right-Click** on the *3-6 Infantry Unit and select **Convert to 4-6 Inf** (or **press Ctrl-C**).

"", Highlight/Unhighlight all Non-Op (Aborted - nonoperational) air unit locations on the main map (see Rule 23).

"", Highlight/Unhighlight Engineer units locations on the main map (see Rule 14.A).

"", Highlight/Unhighlight all Resource units locations on the main map (see Rule 12.F).

"", Highlight/Unhighlight all Fort counter locations on the main map (see Rule 31.A.5).

"", Highlight/Unhighlight all Airbase counter locations on the main map (see Rule 17).

"", Highlight/Unhighlight all Soviet Factory locations on the main map (see Rule 31.D; also 20.F.1.b & 34.B.2).

Total All Countries' Air Units: "", **Left-Click** button to add up each country's air units on the main map and display those totals on the Nation's Active Air Group window, located in the Baltic Sea (left side of main map). This is a convenient way to check if the on map air units agree with the air groups allowed amounts on the Air charts under the Charts button on the main map toolbar.

Remove: "" Clicking the Icon opens a menu where you can remove all the top labels on all the Axis units or remove all the top labels on all the Soviet units. These labels are primarily used for setup purposes and not needed thereafter but are historically accurate if you wanted to keep your Army Groups together (or wondered where they wandered off to during the game).

Weather: "" This will report in the chat window the current weather in each of the weather zones on the Main Map. This information is also available by clicking on charts then Turn-Weather tab. However, this is a quick way to check the weather or have it "handy" while making your move.

* Weather in Zone A: Snow --- Zone B: Frost --- Zone C: Mud --- Zone D: Clear --- Zone G: Clear

- Map Image:** “” Takes a picture of the entire game map, not just what is currently showing on the screen when you take it. You will be able to see the entire map with all the on map game units.
- Map Zoom:** “”, **Left-Clicking** the “+” button gives a closer up view of the map, **Left-Clicking** the “-” button bring you view further out to see more map. Instead of preset zooming in or out, you can **Left-Click** the **middle magnifying glass** lets you select what level of zoom you want to use.
- Hide Units:** “” This will remove all Game counters from the map showing only the game map that is underneath all the Game counters. This will give you a clear view of the underlying terrain (this will also remove any destroyed markers on fortresses).
- Overview:** “” This will bring up a smaller window showing the entire game map with all visible Units on it. It helps to get a bigger perspective on the battle and you can **Left-Click** on the **Overview** map which will reorient the main map to the location where you **Left-Clicked** on the **Overview** map.
Ctrl Shift-O: Opens/Closes Overview Map in upper left corner of game map.
- Show Marker Units:** “”, **Left-Clicking** “” will move Markers (forts, airbases, resources points, rail breaks, and so forth) to the top of the hexes located across the whole Main Map. **Left-Clicking** it again will again rotate the Marker in the hex they are in. **Left-Clicking** it one more time (a third time) will rotate the Marker to the bottom of the hex they are in - their normal position. This makes it easy to see where all the markers are on the main map in relation to each other and other game units like Forts, Airfields, Rail Cut markers, etc..
- Clear Move:** “” Removes the thin red move line from all units on the game map. There is no need to use this button as the game will remove these move lines itself during the game at the correct times. However, after your initial setup you may wish to clear the move lines to start with an uncluttered screen for your first movement phase, even though the game will clear these when you move the game turn to the movement phase.

How to play this game as given by Phases

(after reading the board game's rules, proceed below)

Setup:

All the initial ground and air units have been setup in a stack 1 hex behind their northern most setup hex. The reserves for an area like Army Group North be setup 4 hexes behind the northern most army stack and have a top label designation "AG North Res". For the Soviets, they will have Non-Divisional units as well. These will be stacked 2 hexes behind the Reserve stack and designated "LMD Non-Div". There are some exceptions such as Leningrad's or Kiev's military district where the reserves are located around a specific location. In this case, the reserves will be stacked on or near that location.

Surprise Turn resolution (first turn of game only - Rule 31.F.):

– The Air phase of the Surprise attack has been made very easy to resolve. On the main map, far left side, each player will see the Axis Air after Surprise Turn and the Soviet Air after Surprise Turn windows. After both players have setup all their ground units, the Axis player will need to press the "Execute Air Phase Attack on 1st Game Turn" button. After pressing this button, a small window will open, one at a time, for each air unit the Axis player has that can attack in the Surprise Turn. The Axis player can press Enter (return) to use all the air units of that type in the Surprise Turn or can enter a lesser amount to participate in the Surprise Air Attack Turn. The unused air units will be available on the Jun II, '41 turn for operations on the main map. The air units the Axis player entered will be used for the German Surprise Air Attack and will be used in the calculations for German and Soviet air losses. After the Attack, the Rem'ed, Non-Op, Eliminated in Friendly Territory (EFT) air units will be identified on each player's respective Surprise Attack maps, (those shown above and to the right). The air units the Axis player did not use in the Surprise Attack should be deployed on the main map for Jun. II '41 turn air phase. All the air units used in the Surprise Attack on the Axis side and the total of the not destroyed Soviet air units should remain in the "Available" box on the Axis Air Chart tab and the Soviet Air Chart tab until their respective resolution of the Jun. II '41 Air Return Step in the Air Phase. During their respective Air Phase - Air Return Step, place on the map all the Air Units that participated in the Surprise Turn air attack. Before ending the Jun. II '41 turn's Air Phase, Air Return Step, remove the German air units from the air Available Box and place on the main map in Germany or Rumania and mark the Non-Op air units by **Right-Clicking** on the **air unit**, then **Left-Clicking** on **Op / Non-Op** (or press **Ctrl-F**). The Soviet air units will need to be distributed to the EFT (Eliminated in Friendly Territory) box, the Remnant box or deployed on friendly airbases during the Soviet Jun. II '41 turn's Air Phase, Air Return Step. The group allowance will need to be adjusted according to the Rule 31.F. After this is completed at the end of the Jun. II '41 turn, the windows Axis Air after Surprise Turn and the Soviet Air after Surprise Turn can be permanently closed by **Right-Clicking** on the **window** and **Left-Click** on **Delete** (or press **Ctrl-X**) as they will no longer be needed.

Phases, Axis/Soviet –

Start of next Game Turn

– Advance Game Turn phase, if not advanced already, to the current Game Turn's Initial Phase:

1. Determine weather (29.B.). (weather will be clear until possibly Sep. I '41)

(On the Axis Initial Phase of each game turn the computer will automatically roll and check the Weather Table adjusting the Weather Conditions Display showing the current weather and the Turn

Record Chart showing the current game turn. So, the manual adjustments described below is not necessary.)

Open *Charts*, **Left-Click** on **Turn & Weather** tab. The game will roll a 1d6 die, "", and cross reference the die results with the weather table. If weather changes, the game will drag a blue X, "", to uncover the current weather on each respective weather zone, if any change in that zone.

Initial Phase:

[The computer will automatically place 1 resource point at Ploesti and 2 resource points at Baku as adjusted by delays from enemy capture (31.I.) and/or strategic bombing hits (20.F.1.e.)]

1. a) Land late-returning air units (20.F.2.d. and e.).

Select the returning air units and move to an airbase within its range.

b) Transport supply to ports (28.D. and E.).

Select any Ship unit that will transport supply and move to the port to place the supply. If Soviet ship transports to a non-port hex, all ground units tracing supply to it will be in Special Supply. You show the ground units that are in Special Supply by **Right Clicking** on the **ground unit** to bring up its menu. Click the **Special Supply** line (or **Alt-Ctrl-Shft-U**). This will cause a Special Supply indicator on the left-bottom side of the game unit. *When the Special Supply ends (after 1 game turn), the game will automatically remove the Special Supply status.* Special Supply does not stop or reduce turns out of supply. Although the ground unit will function as if in full supply while operation on Special Supply and does not roll for elimination due to lack of supply, its time out of supply will continue to count until the ground unit is put into full supply or eliminated with an out of supply die roll by the Unit's owing player (see Rule 12).

c) Check Axis garrisons (33).

(On the Main map toolbar, you can press the **Hide Unit** button to more easily find the locations that require a garrison.)

2. Check the isolation (31) and supply (12) status of all units.

(When a unit is isolated or unsupplied and you select the unit, the isolated and unsupplied indicators will move behind the unit to enable clear reading of the face of the unit. As soon as the unit is not selected, the isolated and unsupplied labels will move back to the front.)

If a unit is isolated, Select the unit and **Right Click** to bring up the Menu, then **Select Isolated** (or **Alt-I**), "". This is important when a unit is eliminated so the game knows how to treat the unit when eliminated. If the unit becomes non-isolated, **Right Click** on the affected ground unit and Select **Isolated** again (or **Alt-I**) to remove the Isolated indicator.

If a unit is out of supply, Select the unit and **Right Click** to bring up the Menu, then **Select Unsupplied** (or **Ctrl-U**). This is important when a unit is checking for elimination for lack of supply. The game will keep count how many turns a unit has been out of supply, shown on the bottom of the unit, "", so you know how many turns the unit has been unsupplied when rolling for unit elimination. If the unit becomes re-supplied, **Right Click** on Selected **ground unit** and **press Supplied** (or **Alt-S**) to remove the unsupplied indicator.

3. a) Soviet Transfer of factories and the capital (31.D. and E.).

To transfer the capital, "", Select the capital and press **Ctrl-R** or **Right Click** and select **Use Railroad**. If you have the available railroad available then drag it along the path of its move according to Rules 31.D and 31.E.. If you don't have available Railroad, then you will be given an alert you lack available Railroad to move the capital.

To transfer a factory, “”, Select the factory by **Right Clicking** on it and select **Move Factory?**

The factory will be marked ready to move, “”. In the next Soviet Initial phase, the factory can be moved if there is enough available Railroad capacity. Since all moved factories go to the Urals on the Charts tab of the Main map toolbar, select **Soviet** tab to move to Urals. After moving the factory, **Select** the factory and press **Ctrl-R** to deduct 30 from available Railroad. If you don't have enough available Railroad, press the **Undo Move** Icon to return the factory to its previous location. Otherwise, follow the instructions for placing the factory 7 turns ahead of the present game turn when the factory becomes operational again. When it again becomes operational, press **Move Factory?** again to remove the **Factory Moving** label, starting the factory's production again and move it from the Game Turn box to the Urals box.

b) Receive reinforcements (34.A.), replacements (34.B.). and lend-lease (35); do conversions (34.D.), withdrawals (34.C.), and disbanding (34.E.4.).

To receive reinforcements, open the **Pieces** tab, “”, along the top of the game window on the toolbar. Select the appropriate country, the “type” of unit tab, then Select the reinforcing unit and drag it to the map location of its appearance. (If the unit has an identifying unit designation, you can press **Ctrl-Z** and enter that unit's designation – not required, but is for historical buffs like me.)

To receive replacements, (*The game will automatically add replacement points for each Axis countries replacement pools and Soviet Foreign RPs shown on the “Special Infantry Replacements & Others” window.*) You use by **Left-Clicking** on the currently available number of replacement points, this will open a small window where you will enter the new total amount of replacement points after deducting from the total available the used amounts. To convert the SRPs (Special Replacement Points for each country) to RPs (Replacement Points), simply **Left-Click** on the current accumulated **SRPs Factors** of the respective country and it will be automatically be calculated and added to that country's available RPs (Replacement Points) with the fractional portion available for use in future SRPs conversions.

To use replacements, go to the “Special Infantry Replacements & Others” window and **Left-Click**

on the **RPs value** for the respective country and respective type of Replacement Points (it will have a **light blue** background). Subtract the used amount from the available points to replace the eliminated unit(s) you want. You subtract by **Left-Clicking** on the currently available amount of replacement points for the country, this will open a small window to enter the remaining replacement points still available after subtracting the used points from the prior total available. To find the available replacements, **Left-Click** on the **Soviet/Axis Elimination** map, drag the replaced unit to the location the unit is to go according to the replacement rule 34.B..

| Special Infantry Replacements & Others | | | | | | |
|----------------------------------------|------|-------|-----|-----|--------------------|--------|
| | SRPs | RPs | ARM | ART | NAVAL | RR Cap |
| Soviet | 0/15 | 0 RPs | 0 | 0 | 0 | 50 45 |
| German | 0/14 | 0 RPs | 0 | 0 | 0 | 30 30 |
| Finnish | 0/14 | 0 RPs | | | | 10 10 |
| Rumanian | 0/15 | 0 RPs | | | Rumanian 0 RPs | |
| Hungarian | 0/15 | 0 RPs | | | Austrian 0 RPs | |
| Slovakian | 0/15 | 0 RPs | | | Czechoslovak 0 RPs | |
| Italian | 0/15 | 0 RPs | | | German 0 RPs | |
| Foreign | 0/15 | 0 RPs | | | Polish 0 RPs | |

Soviet Replacement Cities, each city has an accumulated Infantry Replacement Points (IRP) that start accumulating on and after Aug. I '41. To use these Infantry points, go to each replacement city's hex (if it is a multihexed city, go to the Full City hex) and **Right-Click** on the **red star**, “*”, and a menu will show the available Infantry RPs (IRPs) that can be used from that city (if there are more than one city that accumulates IRPs in that military district, you can use the total of all those city's IRP. If you don't use them all, you'll need to decide how much of and which city you'll leave the remaining IRPs). To use the IRPs, **Left-Click** on **Use Infantry RPs**. A small window will appear where you will enter the unused IRPs. If none remain, enter zero "0". **Left-Click and drag** the **replaced Unit** from the Soviet Eliminated Map to the correct location on the map according to the rule 34.B..

To receive lend-lease, place the received unit(s), as available, according to Rule 35..

Do conversions, by Selecting the unit to be converted, according to the requirements in rule 34.D., open the **Right-Click** unit's menu, then **Left-Click** on **Delete** (or press **Ctrl-X**) to correctly remove unit from play. The removed unit is not replaceable and permanently removed from play. Place the new unit in the same location as the replaced unit.

Note: ***3-6 Infantry conversions**, Starting Aug. I '41 the Soviets can convert four (4) *3-6

Infantry units to 4-6 Infantry units each turn. To perform the conversions, **Right-Click** on the **unit to be converted**, **Left-Click** on **Convert to 4-6 Inf** (or press **Ctrl-C**). The *3-6 Infantry unit will be removed and converted to the 4-6 Infantry unit. For easy location of available *3-6 Infantry units, on the Main Map Toolbar **Left-Click** on ***3-6 Infantry highlight** button, "", and all *3-6 Infantry unit's hexes on the Main map will be highlighted in red, "", – to remove highlight, **Left-Click** on ***3-6 Infantry highlight** button, "", again. If the replacing 4-6 Infantry unit is eliminated, it will be placed into the Soviet Eliminated area as a *3-6 Infantry unit – to prevent unrealistic game play, the *4-6 Infantry units are not shown as such on the map.

To withdraw unit(s), To remove withdrawn units from the map according to the rule 34.C, Select on the withdrawn unit by **Right-Click** the affected unit then **Left-Click** on **Delete** (or press **Ctrl-X**) to correctly remove the withdrawn unit.

To disband unit(s), (only applies to Soviets) Select the affected unit(s), remove them from the map according to the rule 34.E.4. To remove the disbanded unit, **Right-Click** the affected unit and **Left-Click** on **Delete** (or press **Ctrl-X**) to correctly remove the disbanded unit. Add the cost of replacing the unit to the RPs available as described above in "To receive replacements". The disbanded unit is permanently removed and not replaceable during the game.

c) Do air replacement system activities (26 and 27).

The process is fully described in Rules 26 and 27. The only thing you'll need to do is to drag a Selected air unit from one of the boxes to another. Also, to remove a culled air unit, **Right-Click** on the culled air unit and **Left-Click** on **Delete** (or press **Ctrl-X**).

d) Repair naval units (28.F.).

To repair a hit on a navel unit, **Right-Click** on the naval unit and **Left-Click** on **Repair 1 Hit on Ship** (or press **Alt-R**). *To add a hit, Right-Click on the naval unit and Left-Click on Add 1 Hit to Ship (or press Ctrl-H).*

4. a) Repair air units (23).

To repair a inoperative air unit after a successful repair roll (it will have NonOp across the top of the air unit), **Right-Click** on the air unit and **Left-Click** on **Op / Non-Op** (or press **Ctrl-F**).

b) Construct forts, "", and permanent airfields, "", Soviet owned or "", Axis owned (14.A.1.) – an asterisk in the upper left corner will indicate ownership, red, "*****", for Soviet (and neutral countries) and gray, "*****", for Axis. *(To change initial ownership of airfield, Right-Click on the Airfield, and select Captured or press Alt-Ctrl-Minus. This will change the ownership asterisk color to gray "" if Axis owned it or red "" if the Soviets owned it.)*

To construct a fort, "", you must spend 1 resource point, "", within supply range of the constructing unit then **Right-Click** on the constructing ground unit (Combat Engineer or Construction Engineer) that will construct the fort and **Left-Click** on **Place Fort** (or press **Alt-F**). A small window will open and ask how many phases are needed to construct the fort, there are 2 phases per game turn. Refer to the construction rule 14.A.1 through 14.A.1.d to determine how many game turns will be needed for construction, then double the number to convert the game turns into phases. A fort counter will be placed where the constructing unit is located, with the number of remaining game turns before completion. The remaining number of turns is located in the center of the fort being constructed, "". The game will automatically reduce the remaining

game turns by 1 after each 2 initial phases (1 German + 1 Soviet Initial Phase or vice versa depending when construction was started) that have passed after construction began.

To construct a permanent airfield, “”, you must spend 1 resource point, “”, within supply range of the constructing engineer unit then **Right-Click** on that ground unit (Combat Engineer or Construction Engineer) that is constructing the permanent airfield and **Left-Click** on **Place Perm. AF** (or press **Alt-P**). A small window will open and ask how many phases are needed to construct the airfield, there are 2 phases per game turn. Refer to the construction rule 14.A.1 through 14.A.1.d to determine how many game turns will be needed for construction, depending on location and weather, then double the number to convert the game turns into phases. An airfield counter will be placed where the constructing unit is located with the number of remaining game turns before completed. This game turn number is located in the top-left quarter of the airfield being constructed, “”. The game will automatically reduce the remaining game turns by 1 after each 2 initial phases (1 German + 1 Soviet initial phase or vice versa) that have passed after construction began. When a permanent Airfield is captured, **Right-Click** on the Airfield, and select **Captured** or press **Alt-Ctrl-Minus**. This will change the ownership asterisk color to gray “” if Axis now owns it or red “” if the Soviets now own it.

To build a temporary airfield, **Right-Click** on the ground unit (Combat Engineer or Construction Engineer) that will construct the temporary airfield must spend 4 movement points and **Left-Click** on **Place Temp. AF** (or press **Alt-T**), “”. The temporary airfield will be placed immediately in the location of the constructing unit – there is no resource point spent to construct a temporary airfield. Later, at the end of any phase, if no unit capable of constructing the temporary airfield is in the same hex with the temporary airfield, the temporary airfield is removed from the map and any Air units located on that airfield are placed in the Rem Box on the respective side’s Air Chart if they don’t escape with the escaping flying to an airbase within range.

5. Plan airborne operations (25.D.).

To plan an airborne operation, **Left-Click Notes**, then **Left-Click Delayed**. Type in the landing hex, the units landing there, plus where they are starting from, and the turn they will air drop. On the turn and time of the airborne operation, you reveal the planned operation by **Left-Clicking** on the **Reveal check box** in the upper right area of the airborne operation in Note.

– Advance Game Turn phase to the Game Turn’s Movement Phase:

(One of the more challenging things I found in this game is to remember where I was attacking and which units were to participate in that attack! I have provided an aid for those who want help. Right Click on the top ground unit attacking and select “Place Soviet/Axis Attack Direction Arrow”. (You can also find it in Main map toolbar, Pieces, Markers, the aids: Axis Attack Direction, “”, & Soviet Attack Direction, “”, these are rotatable to point to the hex being attacked and should be placed on top of the units attacking.) If the same hex has units attacking in 2 or more different directions, place the Attack Direction marker on top of each group of units attacking in the direction they are attacking. Place any non-attacking units above the Attack Direction Arrows. Remove Attack Direction Arrows after the attack is resolved.)

Movement Phase:

– If you hold the mouse cursor over a stack on the main map, it will display: the total number of units in the hex, the number of Divisions, the Number of Artillery, and the number of AA factors available in that hex, “”. If there is a unit that does not have a field value, then a “?” will show also.

Conditional Reinforcements – The game searches for Soviet Conditional Reinforcements, but not Axis Conditional Reinforcements. It will automatically place all Soviet units that are triggered by the Axis after the Axis movement in the Movement and/or Exploitation phases. This search causes a significant delay in advancing from the Axis Movement to Air phase and the Axis Exploitation to Soviet Initial phases as the game searches each Axis unit’s location to see if the triggering condition has been triggered by the movement of each Axis unit on the map (except Finnish units). You’ll need to manually check for Axis conditional reinforcements because a number of the conditions are not a “searchable” condition that can be known by the game program.

1 . Break down units (15).

To get to the break down units, **Left-Click Charts** button on the main menu, then **Left-Click** on the **Axis** or **Soviet** tab. On this sheet you will see all the break down units available. Read rule 15 to properly use these ground units. To exchange the full division with the appropriate break down units, refer to the Axis or Soviet Unit Breakdowns, remove the correct break down units and place the divisional’s “broken down” units in their place. You will **Left-Click and hold then drag** the units to the division’s location and **Left-Click and hold and drag** the division to the break down area. The break down units can be supported or unsupported when placed on the map. To change from supported to unsupported or vice versa, open the **Right-Click** unit’s menu, then **Left-Click** on **Flip** (or press **Ctrl-F**) to change whether the unit is supported, “”, or unsupported, “”. If you choose the supported ground units, you do not receive the HQ unit; if you choose the unsupported ground units, you also receive the HQ unit.

2. a) Move ground units, including administrative, road, and rail movement (6 and 7) – *The Soviets have limitations on certain combat/motorized divisional sized units (see Rule 31.C).*

All game units that are able to move can be **Left-Clicked** and **held then dragged** to whatever location you wish within their movement limitations. *(Note: Some of the most heated arguments I’ve seen in this game (other than cursing at their die rolls) have to do with a game unit’s movement – where did it come from and how did it get where it is at. The following rule is intended to substantially reduce or eliminate these arguments.)* Since each game unit leaves a “movement trail” (**red line**) when you move it, each side will know where the game unit started and how it got to where it is currently located. This shows the other player(s) how your game unit moved through the hexes on the map – its path. You need to move the game unit in a straight line along the hex row, column, and/or diagonal, thus leaving an unambiguous trail, in all the directions the game unit moves. You can release the game unit after moving in one direction, then Select it again and move it in a new direction when you want to change directions showing the hex where the game unit’s direction changed. This movement trail will also be important to resolve questions of movement costs and possible zones of control effects during the Movement Phase, Air Phase (Patrol Zones passed through) or Exploitation Phase. The “movement trail” lines left by moving the game unit is the game unit’s movement in the movement/air/exploitation phases through whatever terrain it covers - no exceptions. If you do not make a clear movement trail (as shown in example window on right), your opponent **will** decide what hexes your unit moved through using any hexes the opponent wants that the movement trail touched or passed through and move it back if it doesn’t have the movement points to reach the original player’s intended hex location – even if the original moving player doesn’t think the path the opponent selected makes any sense!! This is the cost of not having a path that is clear! When

moving, make your game unit's paths clear! If you make a mistake, in the upper left corner of the game window is an "Undo" icon/button "↶" - press this to "Undo" your last action taken. You can go back and "Undo" a number of actions, but you cannot redo an action after you "Undo" that action - there is **no** "Redo" icon/button to redo the "Undo" just made. So be careful or you might have to remake a lot of moves!

- b) Execute overruns (13), including resolution of overrun AA (AntiAircraft fire, rule 38.B.1.).
Read rule 13 and 38.B.1, if AA is present, then move ground units according to Movement Phase, 2.A above's description. *If you hold your mouse cursor over the hex with the overrunning units, it will display the total AA available from all units in the hex. You'll need to subtract the AA of any unit in the hex that is not participating in the AA fire, if any.* You can fire AA at each defending air unit by **Left-Clicking** on the **2d6 dice** button on the main map window (or press **F2**), then cross reference the dice roll and the total AA being used with the **CRT** tab located in the **Charts** Button.
- c) Move and replenish ships, move river flotillas, and conduct naval transport (28).
Read the rules on naval units movement and restrictions, then move the ships units according to Movement Phase, 2.A. above's description, but on river/sea hexes.
- d) Demolish rail lines (7.C.), airbases (17.D.), and bridges (39.A.).
Any ground unit with a combat factor greater than zero can demolish (destroy) a rail line or airbase.
Demolish rail lines, by moving the ground unit to the hex with the rail line running through it, spend 2 movement points, **Right-Click** ground unit to open its menu, then **Left-Click** on **Cut Rail Marker** (or press **Alt-C**). A rail cut marker will be placed in the hex of the ground unit cutting the rail line.
Damage airbase capacity, by moving the ground unit to the hex with the airbase in it, spend 2 movement points for each point of damage to be applied to the airbase, **Right-Click** airbase to open its menu, then **Left-Click Add Hit** (or press **Alt=**) for each hit. A remaining capacity level will be shown on the airbase, "**cap**". The capacity of the airbase will decrease for each hit added and increased for each hit repaired by an engineer, **Left-Click Remove Hit** (or press **Alt-[minus]**) for each hit removed (repaired). The capacity is the allowed number of air units that may takeoff from the airbase in the air phase for a mission; an unlimited number of air units can land at an airbase.
Demolish bridges, (optional rule 39.A.) There is currently no process built into the computer game to handle this optional rule. Read the rule 39.A. and do as instructed. To mark a demolished bridge, open the **Units** tab, open **Markers** tab, and **Select and drag** the Bridge Demolished marker to the location of the demolished bridge.
- e) Use the construction abilities of engineers (14.A.1.).
(See Rule 14.A.1.b. & 14.A.1.c. for possible quicker repair/construction costs than those shown below.)
Constructing forts and airbases are covered in **Initial Phase**:, 4.b.
To repair damage airbases, for each 2 movement points spent by the appropriate engineer unit in the hex of the airbase repairing the airbase, 1 hit is removed. To remove 1 hit, **Right-Click** on airbase and **Left-Click** on **Remove Hit** (or press **Alt+**) – repeat for each additional hit removed.
To repair a cut rail line, spend 4 movement points in the hex of the cut rail line by the appropriate engineer unit in the hex to be repaired, then to remove **Right-Click** on **Cut Rail Line** marker, then **Left-Click** on **Delete** (or press **Ctrl-X**).
To damage/repair a port, to damage a port, for each 3 movement points spent in the port hex, **Left-Click** on **Units** tab, then **Left-Click** on **Markers**, **Select Hit-1 or Hit-2** and move to the port hex. **Right-Click** on **Hit-1** and/or **Hit-2** marker, then **Left-Click Change Label** (or press **Ctrl-L**). Enter "Port" to identify the hit marker's purpose. To repair a port, an engineer must spend 4 movement

points for each hit repaired, then **Right-Click** on the **Hit-1** and/or **Hit-2** marker and **Left-Click** on **Delete** (or press **Ctrl-X**) to repair the port and remove the hit marker(s).

f) Regauge rail lines (14.A.4.).

Read rule section 14.A.4. to understand repairing and regauging rail lines movement costs. To repair a rail line, use the same process as described in “**Movement Phase:**, 2.e.” above. To regauge a rail line, in clear weather, costs 2 movement points, in any other weather, it costs 4 movement points. Once the movement cost is spent, advance the standard rail gauge marker, “”, for Axis or broad rail gauge marker, “”, for Soviet.

g) Fire AA against air units flying harassment (38.B.2.).

Use the same AA process as “**Movement Phase:**, 2.b. Execute Overruns” above, when performing AA fire against air units flying a harassment mission.

3. Assemble broken-down units (15).

To assemble broken-down units, all of the component parts of the division must be stacked in the same hex, then do the reverse of “**Movement Phase:**, 1. Break down units” above.

– **Advance Game Turn phase to the Game Turn’s Air Phase:**

Air Phase:

– *The board game’s version of the Air Phase is very interactive, difficult and long, to be run in a computer simulation, especially when players are not within “shouting distance” while performing it. However, it is doable but with a lot of extra time and difficulty to perform it. One of the advantages of the SE options above is it allows the non-phasing player to resolve all Patrol Attacks and Air to Air Combat without the phasing player needing to do anything until these are finished and resolved. For those of you who would like to get similar results to the “manual” version of the Air to Air phase but with much less time and difficulty involved to perform it, I’ve included two game options: 1) to resolve patrol attacks and 2) to resolve air to air combat. Since I’ve played the game with and without these options, I strongly recommend that you use the options! The game starts with them “on” by default. You can turn them off (by unchecking their box in **File – Preferences – SE Options** tab, but there is actually no need to do so as you don’t have to use these Air options even if they are “on” and available. I’ve included “Patrol attacks” option and “Air to Air combat” option in the descriptions below, assuming you may want to use them.*

1 . Initiate missions (20), move air units (18), and resolve patrol attacks (19).

Read SE Rule 20 to understand types of mission air units can initiate. After deciding which air mission a group of air units will perform, move the air units (according to SE Rule 18) to their mission hex. You move the air unit(s) by **Left Clicking** on the **air unit(s)** and **drag** them to their mission location. [Remember the “**Movement Phase:**, 2.a.” “clear path” requirements above.] The same “clear path” is necessary for air units as well and the same consequences applies if you don’t make a clear path.

Send Fighter Unit on a Tactical Bombing Mission: To designate a fighter unit as a mission unit, **Right-Click** on the **fighter unit**, “”, you want to use as a Mission Fighter, then **Left-Click** on **Replace with Mission Fighter** (or press **Alt-H**), “”. The fighter will have a new designation across the top showing it is a “M.F.” type air Unit . To change it back to a fighter only, repeat the process on the Mission Fighter unit and it will return to the fighter only unit again.

Send Fighter Unit on an Extended Range Escort Mission: To send on a fighter on an extended range escort mission, **Right-Click** on the **fighter unit**, then **Left-Click** on **Replace with Ext. Range Fighter**. The fighter unit’s Attack and Defense factors will be reduced by 2 but not to less than 1. The fighter unit’s range will be doubled.

Patrol attack (option). As soon as the game turn is advanced to **Air Phase:**, all the non-phasing player's fighter air units will show a zone that each of non-phasing fighter units can perform a patrol attack in. The phasing player now will fly all the mission and escort air units to the mission target hexes (and should consider flying around patrol zones if possible). After the phasing player flies all mission and escorts to the hexes of their missions, the non-phasing player then picks one mission hex to resolve patrol attacks and sends any fighters whose movement trails the mission or escort air units passed through for that fighter unit's patrol zone (remember the non-phasing player cannot send more fighters to patrol attack than the current capacity of the airfield it flies from. To send the fighter to patrol attack the phasing player's air units in the chosen hex **Right-Clicks** on the **fighters** to bring up its menu, then **Left-Click** on **Patrol Attack** (or press **Ctrl-P**). The Fighter's patrol attack zone will disappear and one will be added to the count under the column with the same value as the fighter's attack factor, at the upper part of the PA map – the fighter will remain where it was and cannot be selected again for another patrol attack during this phase. After all the patrol attacking fighters have been designated for this particular mission hex, resolve the patrol attack by going to the **PA Map** and **Left-Click** on **Execute Patrol Attack**. Any phasing player's mission force or escorts that are marked with a blue border, "", have been turned back and cannot complete their mission. **Left-Click** on **Return Air Units** to send the mission and escort air units back to their original hexes on the main map. The results of each Patrol Attacking fighter will be shown in the Chat window above the map. The non-phasing player selects the next mission hex and repeats this sequence for each mission hex until all are patrolled attacked or passed over by the non-phasing player.

Note: On Oct I '42 game turn (game turn number 32) through the end of game, the Soviet Guard Fighter Units' Patrol Zone range will be automatically extended by the game to ½ the Guard fighter's normal movement range (rounded down) from the 2 hexes range it was before the Oct I '42 game turn (19).

2. Fly interception and scramble missions (18, 20.A, & 20.B).

To fly interception, the non-phasing player now flies, to any mission hex, any fighter(s) desired and within intercept range (½ movement range rounded down) of those mission hexes. To fly the fighters, **Left-Click** on a **fighter and drag** it to the mission hex within ½ interceptor's range.

3. Resolve air combat (21).

Air to Air Combat resolution (option). The non-phasing player **Left-Clicks** on each **mission hex** that contain phasing and non-phasing player air units flown there this air phase. All units, air and ground, will disappear from the hex. However, only air units of both sides that do not have a blue border (i.e., those not returned by a patrol attack) will appear on the Air to Air map, the rest will be temporarily held off the map. Continue adding air mission hexes until all (up to 20) air missions hexes with both phasing and non-phasing air unit in the hex have been added. The number of air missions added to Air to Air map can be check by **Left-Clicking** on **Air to Air Map**, "", tab on the main map window. When finished adding air missions, resolve air to air combat by going to Air to Air Map, "", and **Left-Clicking** on **Fight ALL Air to Air Combats** – it may take a few minutes to finish each of these air to air battles depending on the speed of your computer. After air to air combat resolution, all air and ground units need to be return to their original locations on the main map – this is done by **Left-Clicking** on **Return All Units** on the Air to Air map toolbar. After all air to air mission combat has been resolved, each player will need to go to each mission hex and **Right-Click** on each **KIA air unit**, "", then **Left-Click** on **EET** (Eliminated over Enemy Territory) or **EFT** (Eliminated over Friendly Territory), return all Non-Op, "", and blue bordered, "", return air units to a friendly airbase. This will remove “map clutter” during the next 2 phases: 4. Fire AA and 5. Resolve most missions.. .

The Air to Air map can hold up to 20 air mission hexes for air to air combat resolution. If the non-phasing player has more than 20, then the non-phasing player will need to resolve (fight) the air to air of the first 20 by *Left-Clicking* on *Fight ALL Air to Air Combats*, clear the Air to Air map by *Left-Clicking* on *Return All Units*, then *Left-Click* on *Reset A2A Map*. After this is done, the non-phasing player can repeat the above Air to Air Combat resolution procedure for the next set of up to 20 air to air mission resolutions.

4. Fire AA (22).

Read rule 22 on procedure for AA fire. To perform AA attack on air units, roll 2d6 dice, *Left-Click the 2d6 picture*, “”, (or press **F2**) move the mouse cursor over the hex where the AA fire originates. A small window will appear showing the total amount of AA factors in the hex. If there are not allowed or nonparticipating units in the AA fire, remove their factors from the total AA factors. Use this modified amount on the AA table that you can open by *Left-Clicking* on *Charts*, then *Left-Clicking* on *CRT*. The AA chart is in the middle right on the CRT chart. Cross reference the dice roll (2d6) and the AA adjusted factors - roll dice again for each air unit fired upon.

5. Resolve most missions (20), including airborne operations (25).

Read rule 20 and/or rule 25 to find steps for mission resolution. *(The computer game does not resolve any Strategic bombing missions. So you will need to adjust the Strategic bombing strengths on extended range missions and resolve on your own because there is not enough counter space to show fractional Strategic bombing values which the computer games does not use (along with fractional Tactical bombing values which the computer game does use in tactical ground combat support.)*

1. Strategic bombing of Rail Marshalling Yards (20.F.1.d.). If a hit is achieved on a rail marshalling yard, *Right-Click* on the *Airbase* in the Major city that was hit. *Select* “*Add 1 Marshalling Yard Hit*”. This will reduce the Available Railroad REs (Regimental Equivalents) and not Railroad Capacity REs. If a partial city hex, will make this option no longer available during this air phase in this major partial city hex. If a major full city hex, the 2nd hit will make this option no longer available during this air phase for this major full city hex.

6. Return phasing air units to base (18).

Phasing player returns all air units that are not flying defensive support mission back to a friendly airbase within movement range shown on the Air Unit.

7. Return non-phasing air units to base (18).

Non-phasing player returns all air units back to a friendly airbase within movement range shown on the Air Unit.

– Advance Game Turn phase to the Game Turn’s Combat Phase:

Combat Phase:

1 . At the beginning of the German combat phase only, the Soviet player announces which hexes his ships are supporting with gunfire (28.B.2.).

Read rule 28.B.2.. and use the Status markers, “”, to indicate which hex(es) and how many ship factors are defending those Soviet hex(es). These Status markers are located in Pieces, Markers, Status 1 through Status 5. Since Naval Fire Support is half of the number shown on the ships counter, for fractional amounts Select the Status marker and press **Ctrl-L**, then enter the fractional number. I.e., if a printed 5 is supporting, use a 2 Status marker and enter 2.5 for the support value (or use a 5 Status marker and enter 2.5 as the support value, “”) – as long as everyone agrees on the method, either will work. The “Defend” tab on the Main map Toolbar for Combat resolution

does not add defending Naval supporting fire. So, this will need to be added by the player when the amount computed by the game is shown and adjustments to it are allowed.

2. Resolve combat (Rule 9 and many other rules).

Combat resolution (option): There is a combat option to allow the combat odds column to increase to the next column higher based upon the percentage of extra combat factors over the needed amount for the current combat column to move up to the next combat column. I.e., if attacker has 11 combat factors and defender has 3, the odds are 3.66 to 1. This would be resolved on the 3:1 table unless this option is checked, in which case a percentage die roll would change the odds column to 4:1 on a roll of 66 or less. If the roll on the percentage die (1d100) was 66 or less, the combat resolution would be on the 4:1 table instead of the 3:1 combat table – adding a bit more “unknown” to the combat resolution process.

Combat resolution process:

– Move all attacking player’s ground support air units for this attack from the target hex to one of the hex(es) of attacking ground units by **Left-Clicking** on **mission air units** and **dragging** them to that hex or select the individual mission Air units performing ground support along with the ground units.

– The computer game will adjust the attack factors according to the individual attacking and defending unit’s supply status but does not modify the attacking or defense strength due to terrain hex or hexsides – the player will need to calculate the attack strength manually to account for halving or quartering of attack strength from certain terrain effects (most of the time this will not be required). Check the terrain in the defending hex and hexsides between the hex(es) of the attacking ground units and defending hex for combat factor adjustments and positive and/or negative die roll modifications from terrain, AECA/AECD/ATEC ratios plus any other modifiers. (Map terrain can be seen by **Left-Clicking** on **Hide Units** button on main map toolbar, “”).

***Left-Click** again to un-Hide units.)*

– Select all attacking ground and mission air units by **Left-Clicking** on the **attacking ground** and **air units**, then **Left-Click** on **Attack-Attack**, “”, on main map toolbar. This will bring up a small window asking the attacker to verify or adjust the attack factors the computer has calculated. If there are no changes needed, press **ENTER**, otherwise enter the correct attacker’s factors and press **ENTER**. This is a list of conditions that may require the attacking player to adjust the attack factors different from what the game computes (see Terrain Effects Chart for the affect):

1. Attacking a Full or Partial hex City,
2. Attacking a Fortress hex,
3. Attacking a Forest, Mountain, or Swamp hex,
4. Railroad or Siege Artillery attacking a Fortress, Full or Partial hex city has its combat factor doubled (14.B.1 & 2.),
5. Assault Engineer same as Combat Engineer and has x2 unit’s Attack Factor when attacking a Fortress, Full or Partial hex city (14.A.3.),
6. Attacking across a River, Major River or Canal hexside,
7. Attacking Naval gun support (28.B.2.),
8. Unsupported attacking units,
9. More artillery RE than non-artillery RE attacking from a hex into defender’s hex (14.B.),
10. Weather Conditions other than Clear.

– **Left-Click** on the **defending hex** to select all the defending ground and air units then on the main window’s toolbar **Left-Click** on **Defend**, “”. A small window will appear asking if the defense factors is correct, if correct press **ENTER**, otherwise enter the correct defense factors then press **ENTER**. This is a list of conditions that may require the defending player to adjust the defense factors different from what the game computed (see Terrain Effects Chart for the affect):

1. Defending Naval gun support,
2. Unsupported defending units,
3. More artillery RE than non-artillery RE defending in a defender's hex (14.B.),
4. Assault Engineer defending a Fortress, Full or Partial hex city (x2 unit's Defense Factor).

(The computer will open a 2nd small window and ask for the summed total of all adjustments to the die roll, enter zero (0) if none, if what is in the window is correct, press **ENTER**, otherwise enter the correct die roll modification to the die roll and press **ENTER**.)

- The computer will display in the chat window the results of the attack. These results must be immediately implemented on the defending and/or attacking ground units before moving to the next combat and losses are always determined by the factors printed on the ground unit(s) attack factor or defense factor, not a value adjusted for any reason – remember Air/Naval units are not affected by nor are their factors added in considering any ground combat loss calculations.
- After implementing ground losses and/or retreats, perform the next ground combat starting the process at Combat resolution process: above and continuing the same with each combat until all ground attacks are executed (concluded).

– Advance Game Turn phase to the Game Turn's Exploitation Phase:

Exploitation Phase:

Note: Only combat/motorized may perform activities in this phase.

- *The Soviets have limitations on certain combat/motorized unit movement (see Rule 31.C).*
- *All movement paths will be removed at the beginning of the Exploitation Phase.*

1. Break down units (15).

To get to the break down units, **Left-Click Charts** button on the main menu, then **Left-Click** on the **Axis** or **Soviet** tab. On this sheet you will see all the break down units available. Read rule 15 to properly use these ground units. To exchange the full division with the appropriate break down units, refer to the left side of the chart and remove the correct break down units and place the division broken down in their place. You will **Left-Click and hold then drag** the units to the division's location and **Left-Click and hold and drag** the division to the break down area. The break down units can be supported or unsupported when placed on the map. To change from supported to unsupported or vice versa, open the **Right-Click** unit's menu, then **Left-Click** on **Flip** (or press **Ctrl-F**) to change whether the unit is supported or unsupported. If the units are supported, you do not receive the HQ unit, if the units are unsupported, you receive the HQ unit.

2. a) Move units, including road movement (6 and 7.B).

All combat/motorized game units that are able to move can be **Left-Clicked** and hold then dragged to whatever location you wish within movement limitations. To know which ground units are combat/motorized **Left-Click** on **Charts**, then **Left-Click** on **Unit ID**. At the top of the chart you will see all the designations of combat/motorized units. *I'll repeat this statement: Some of the most heated arguments I've seen in this game (other than die rolls) have to do with a game unit's movement – where did it come from and how did it get where it is at. The following rule is intended to substantially reduce or eliminate these arguments.* Since each game unit leaves a "movement trail" when you move it, each side will know where the game unit started and how it got to where it is currently located. This shows the other player(s) how your game unit moved through the hexes on the map – its path. You need to move the game unit in a straight line along the hexes, thus leaving an unambiguous trail, in each direction the game unit moves. You can release the game unit then Select it again and move it in a new direction when you want to change directions showing the hex where the game unit direction changed. This movement trail will also be important to resolve questions of movement costs and possible zones of control effects during

the Movement Phase. The “movement trail” lines left by moving the game unit is the game unit’s movement in the movement/air/exploitation phases through whatever terrain it covers - no exceptions. If you do not make a clear movement trail, your opponent *will* decide what hexes your unit moved through using any hexes the opponent wants that the movement trail touched or passed through and move it back if it doesn’t have the movement points to reach the original player’s intended hex location – even if the originally moving player doesn’t think the path the opponent selected makes any sense!! This is the cost of not having a path that is clear! When moving, make your game unit’s paths clear! If you make a mistake, in the upper left corner of the game window is an “Undo” icon/button “” - press this to “Undo” your last action taken. You can go back and “Undo” a number of actions, but you cannot redo an action after you “Undo” that action - there is **no** “Redo” icon/button to redo the “Undo” just made. So be careful.

b) Execute overruns (13), including the optional resolution of overrun AA (38.B.1).

Read rule 13 and 38.B.1, if AA is present, then the moving combat/motorized ground units may fire AA according to Movement Phase, 2.A above’s description. If you hold your mouse cursor over the hex with the overrunning units, it will display the total AA available from all units in the hex. You can fire AA at each defending air unit by **Left-Clicking** on the **2 dice** button on the main map window (or press **F2**), then cross reference the dice roll and the total AA being used on the **CRT** chart tab located in the **Charts** Button.

c) Demolish rail lines (7.C), airbases (17.D). and bridges (39.A).

Any combat/motorized ground unit with a combat factor greater than zero can destroy a rail line or airbase.

Demolish rail lines, by moving the ground unit to the hex with the rail line running through it, expend the 2 movement points to cut the rail line and **Right-Click** combat/motorized ground unit to open its menu, then **Left-Click Cut Rail Marker** (or press **Alt-C**). A rail cut marker will be placed in the hex of the combat/motorized ground unit cutting the rail line.

Demolish airbases, by moving the combat/motorized ground unit to the hex with the airbase in it, spend the 2 required movement points, **Right-Click** airbase to open its menu, then **Left-Click Add Hit** (or press **Alt=[Equals]**). A hit will be added to the airbase’s level of damage each time this is done and the remaining useable airbase capacity will be shown on top of the airbase.

Demolish bridges, (optional rule), “”, There is no process built into the computer game to handle this optional rule. Read the rule 39.A. and do as instructed. To mark a demolished bridge, open the **Units** tab, open **Markers** tab, and **Select and drag** the **Bridge Demolished** marker to the location of the demolished bridge.

d) Fire AA against air units flying harassment (38.B.2.).

Read rule 22 and 38.B.2. on procedure for AA fire against air units flying a harassment mission. To perform AA attack on air units, roll 2d6 dice, “”, **Left-Click the 2 six-sided dice picture**, move the mouse cursor over the hex where the AA fire originates. A small window will appear showing the total amount of AA factors in the hex. If there are nonparticipating units in the AA fire, remove their factors from the total AA factors. Use this modified amount on the AA table that you can open by **Left-Clicking** on **Charts**, then **Left-Clicking** on **CRT**. The AA chart is in the middle right on the CRT chart. Cross reference the dice roll and the AA adjusted factors - roll dice again for each air unit fired upon.

3. Assemble broken-down units (15).

To assemble broken-down units, all of the component parts of the division must be stacked in the same hex, then do the reverse of “**Exploitation Phase**: 1. Break down units” above.

Advance Game Turn phase to the Initial Phase for the Soviet’s Turn phases and repeat sequence above:

At End of the Soviet Player Turn:

1. Scuttle river flotillas (28.E.).

To scuttle, **Right-Click** on **flotilla**, then **Left-Click** on **Eliminated** (or press **Ctrl-E**). The flotilla will be placed into the Eliminated window. To open the Eliminated window **Left-Click** on **Soviet** on main map toolbar, “”.

When Appropriate: – *Note: The following may occur in the movement, air, combat, and/or exploitation phases.*

1. a) Resolve air unit escape when airbases are captured (17.B.).

Read rule 17.B.. Roll 1d6 die by **Left-Clicking** on **1d6 die**, “”, on main map window or press **F1** for each operative air unit attempting to escape. On a roll of 1, 2, or 3, the air unit escapes and flies to a friendly airbase up to 3 times the air unit’s movement rate and becomes nonoperational (inoperative), “” to “” – **Select** Air unit and press **Ctrl-F**. On a roll of 4, 5, or 6, the air unit does not escape and is eliminated. To eliminate the air unit **Right-Click** on the **air unit**, the **Left-Click** on **Rem** (or press **Alt-Ctrl-R**) – this will place the eliminated air unit in the Remnant Box on the Air Chart.

b) Resolve ship escape when ports are captured (28.B.4.).

Read rule 28.B.4.. Roll 1d6 die by **Left-Clicking** on **1 die**, “”, on main map window or press **F1** for each ship unit attempting to escape. On a roll of 1, 2, 3, or 4, the ship escapes and is considered at sea at the port hex. On a roll of 5, or 6, the ship does not escape and is eliminated. To eliminate the ship **Right-Click** on the **ship unit**, the **Left-Click** on **Eliminated** (or press **Ctrl-E**) – this will place the eliminated ship unit in the eliminated **Soviet** window.

c) Abandon 0-capacity airfields (17.D.).

To abandon an airbase that has been reduced to zero capacity, **Right-Click** on **airbase**, then **Left-Click** on **Delete** (or press **Ctrl-X**). Any Air unit on the abandoned airbase is put in the Remnant Air Box.

d) Destroy resource points (39.B. – Optional Rule).

During a player’s turn, that player can destroy any resource points the player owns. To destroy, **Right-Click** on **Resource point(s)** to be destroyed, then **Left-Click** on **Delete** (or press **Ctrl-X**).

e) Load or unload Resource points onto or from a Truck unit.

A Truck, not used for supply purposes in the Initial phase, may carry Resource points. 

To load Resource points, **Right-Click** on Truck, then **Left-Click** on **Add Resource Points**. Enter the new amount carried by adding together the currently carried Resource points with the added Resource points. The Truck cannot carry more than 30 Resource points. Unlike other ground units, a Truck’s movement is not reduced while carrying Resource points.

To Remove Resource points, **Right-Click** on Truck, the **Left-Click** on **Remove RPs**. Enter the number of Resource points you wish to remove from the Truck. The removed Resource points will be placed below the Truck and deducted from the amount the Truck is carrying. (*Note: The first time using Remove Resource points, the game will generate an error in the chat window, but everything will work as it should. Ignore the error - a vassal engine anomaly.*)

e) Capture resource points (39.B. – Optional Rule).

When a one player captures the other player’s resource points, ½ of those points, rounded down, are captured and the remainder are eliminated.
